1b. Still online, already blocked by wallets or the host

MetaMask / ScamSniffer already warn their users about these, or the host shows a phishing warning. The domains still exist, so a registrar takedown is the remaining step.

2. Watch list (medium, or impersonating content without wallet prompts)

MEDIUM **aerodrome-slipstream-get.pages.dev** Impersonation 44/100 · found in CT logs

- Hostname contains the brand name
- TLS certificate issued 2026-10-14 (Certificate Transparency)
- Hosted on Cloudflare Pages subdomain
- Brand named on the page (6x), including the title
- Lure text: rewards

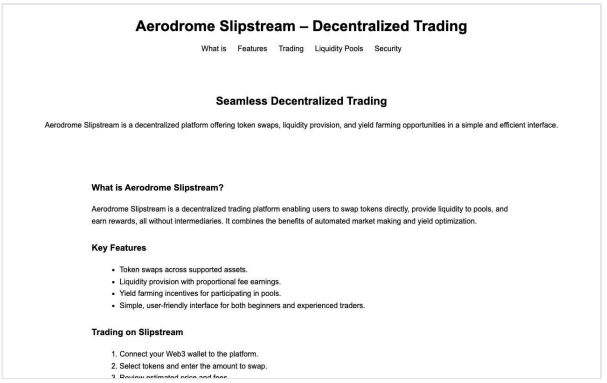

Recommended: Review the screenshot. If it impersonates the brand, file registrar + host reports (drafts attached).

MEDIUM **aerodrome--slipstream.pages.dev** Impersonation 44/100 · found in CT logs

- Hostname contains the brand name
- TLS certificate issued 2026-10-11 (Certificate Transparency)
- Hosted on Cloudflare Pages subdomain

- Hosted on Cloudflare Pages subdomain
- Brand named on the page (20x), including the title

Recommended: Review the screenshot. If it impersonates the brand, file registrar + host reports (drafts attached).

LOW **aerodrome.app** Lookalike, other crypto content 32/100 · lookalike: tld-swap

- Official name on a different TLD
- Lookalike of your domain serving other crypto content (crypto)

Recommended: Review: traffic for a lookalike of your name goes to other crypto content (a competitor, an affiliate, or a phishing kit for another brand). Report if it misleads your users.

▶ 77 token(s) on the watch list

3. Everything else we checked (low / info)

Registered lookalikes without a website, parked pages, certificates for unrelated sites, and labelled false positives. Kept so you can see what was ruled out. 23 are explicitly labelled as false positives or brand-owned redirects.

▶ 135 domain(s)

4. Coverage and limits of this scan

- Certificate Transparency (crt.sh): `aerodrome%` 1755 certs; `aerodrome.%` 1755 certs; `aerodrome-%` 6 certs; `%aerodrome%` 6 certs. crt.sh truncates leading-wildcard searches, so names that only contain the brand in the middle can be missed.
- Newly registered domains (WhoisDS free list, capped at 70k names/day): 2026-10-31: 70000, 2026-10-30: 70000, 2026-10-29: 70000, 2026-10-28: 70000, 2026-10-27: 70000, 2026-10-26: 70000, 2026-10-25: 70000.
- Tokens: base: 30 days of new pools. Only tokens that got a Uniswap/Aerodrome pool are seen. Free Ethereum RPCs serve about a day of logs.
- Wallet blocklists checked: metamask, scamsniffer.
- Not covered yet: X/Twitter, Telegram and Discord impersonators, app stores, paid ads, Solana tokens.
- Scores are heuristics. Every finding above "low" should be looked at by a person before anything is filed.

5. How this was collected

Only public data was read: DNS, certificate logs, public domain lists, public blockchain logs, RDAP, and the public pages themselves (fetched like a normal visitor; no logins, no clicks, no form input, no wallet connected). No suspect was contacted.

Nothing in this report has been filed with any registrar, host or blocklist: every report under "Draft" is text for Aerodrome to approve. We file only with a signed Letter of Authorisation.
